Height: 60.2in  
Width: 47.2in  
Reach: 19ft  
Breaker: 1000ft.lbs  
Power: 22kW

Since 1976 Derrick Concrete Cutting & Construction has maintained a reputation for high integrity, dependability, and quality. By combining highly trained and qualified personnel along with purchasing top of the line precision equipment Derrick has managed to stay ahead of the competition.

The Brokk line of equipment has been a valuable piece of equipment to our company since the first purchase of a Brokk 150 and 250. We have since upgraded to the Brokk 180 and the new Brokk 260.

Brokks performance on service, parts and training has been second to none.

I can confidently say that the Brokk line of equipment has gotten us work combined with our cutting operations that we would have never got if we did not have the Brokks.

In a market that is always changing with new safety restrictions the Brokk always comes out on top.

The flexibility to having other attachments such as crushing jaws, scarifier, grapple and shears makes the Brokks even more valuable in our fleet of equipment.

The flexibility of the machine's 360° movement and close to six meter reach allows the Brokk 260 to work on walls or staircases with ease. The electric power makes it ideal for inside or confined locations.

As times get tough, it is difficult to spend money on equipment but Brokk has always been a wise choice for my company.
